

# COMET 2015 *india*

1st Annual Conference

## Condition based Online Monitoring of Electric Assets

October 6-9, 2015

Insert Conference Venue  
New Delhi

## CALL FOR TECHNICAL PAPERS

**COMET 2015 India** is a technical conference to discuss reliability improvement of electric power systems using online monitoring of power system assets.

The focus is on practical experience with equipment in utility transmission and distribution systems, in power systems for the oil and gas industry, and in motors and generators.

The conference targets non-commercial papers that highlight practical experience with assets, including techniques for life extension and proactive and often preventive mitigation of common problems.

This is an opportunity to learn from various assets failure, ways to prevent failure, and other maintenance and reliability problems in the various power systems.

**The key purpose of COMET India is to offer peer-to-peer exchange of practical information to help make your power system even more reliable.**

Abstracts are solicited on enhancing the reliability and performance of assets targeted under two tracks:

- **T&D Track - Power Transformers, Circuit Breakers, Gas Insulated Substations, SF<sub>6</sub> Monitoring, Underground Cables, Aerial Conductors, Capacitor Banks, Distribution Networks and Switchgears**
- **Rotating Machines Track - Generators, Motors, Distributed Energy Resources**

Other Electric Power Assets not included in our list above are welcome as well. In addition, papers that explain interesting failures and associated phenomenon are also solicited.

Abstracts due **June 12th, 2015.**

Submit by **May 1st** and receive discounted registration.\*

Submit at <http://www.utexas.edu/research/cem/comet/submitAbstract.php>

\*If your paper is accepted for presentation.
