OBJECTIVE

Heavy rain, followed by landslide, in Kerala during August 2018, was the worst flood in Kerala in nearly a century. One sixth of the total population of Kerala had been directly affected by the floods and related incidents like landslides. Heavy rains in Wayanad, Kannur and Idukki have caused severe landslides and left the hilly districts completely isolated.

The present workshop is being organised to analyse the extent of damages occurred due to landslides in Kerala and to suggest mitigation methods.
