

# CONTENTS

<b>Foreword</b>	<b>iii</b>
<b>Preface</b>	<b>v</b>
<b>Chapter 1- Design Parameters for Transmission Lines</b>	
1.1 Introduction	1
1.2 Mechanical Design	1
1.2.1 Wind Speed	1
1.2.2 Maximum Temperature of Current Carrying Conductor	1
1.2.3 Span	1
1.2.4 Tower Steel Sections	3
1.2.5 Stresses in Bolts	3
1.2.6 Ground Clearance	3
1.2.7 Quality of Zinc	4
1.2.8 Weight of Zinc Coating	4
1.2.9 Minimum Zinc Coating	4
1.2.10 Sag Template	4
1.3 Electrical Design	5
1.3.1 Electrical Clearances	5
1.3.2 Air Clearances	5
1.3.3 Minimum Ground Clearance	5
1.3.4 Minimum Clearance above Rivers/Lakes	6
1.3.5 Air Clearance and Swing Angles	6
1.3.6 Clearance between Conductor & Groundwire “At Tower”	7
1.3.7 Clearances at Power Line Crossings	8
1.3.8.1 Power Lines Crossing each other	8
1.3.8.2 Power Lines Crossing Communication Lines	8
1.3.9 Power Line Crossing Railway Tracks	9
1.3.10 Power Lines running along or across the Roads	9
1.3.11 Clearances to Ground and Buildings as per IE Rules 1956 (latest edition)	9
1.3.12 Insulators / Insulation	10
1.3.13 Right of Way Requirement	11
1.3.14 PTCC	12

1.4	Conductor	12
1.5	Earth Wire	14
<b>Annexure A</b>	Typical sag template drawing-Dog ACSR conductor	16
	Typical sag template drawing-Panther ACSR conductor	17
	Typical sag template drawing-Zebra ACSR conductor	18
	Typical sag template drawing-Moose ACSR conductor	19

## **Chapter 2- Inspection and Maintenance Formats of Transmission Lines**

2.1	Introduction	20
2.2	Inspection from Ground	20
2.3	Inspection after Climbing the Tower	20
2.4	Schedule of Inspection and Maintenance Activities	21
2.5	Fault Inspection of Line	21
2.6	Inspection / Check Report for Major Maintenance Work	21
Format-I	- Ground Patrolling Report	22
Format-II	- Tower Climbing Patrolling Report for Critical Lines/ Critical Stretches (Non Outage)	23
Format-III	- Live Line Puncture Insulator Detection	24
Format-IV	- Maintenance Schedules of Transmission Lines	25
Format-V	- Line Declared Faulty Inspection Report	27
Format-VI	- Inspection Report for Major Maintenance/ Breakdown Works	28
Format-VII	- IR Value and other Details of Insulators Under Shutdown	29
Format-VIII	- Measurement of Contact Resistance of Joints (After Replacement of Conductor/ Joints)	30

## **Chapter 3 - Probable Causes of Failure of the Transmission Line Components**

3.1	Introduction	31
3.2	Probable Causes of Damage of Insulators and Hardware Fittings	31
3.3	Probable Causes of Failure of Conductor and Conductor Accessories	33
3.4	Adverse Affects of Vibration	34
3.5	Probable Causes for Damage of Earthwire and its Accessories	34
3.6	Probable Causes for Failure of Towers	35
3.7	Probable Causes for Rusting	37
3.8	Probable Cause of Failure of Tower Foundation	37

3.9	Causes of Erosion at the Base of Foundation / Tower Legs	38
3.10	Probable Causes of Damage of Earthing Electrode and Earthing Strip, etc.	38

<b>Annexure 1</b>	<b>Effect of Vibrations on Performance of Components of Transmission Line</b>	<b>39</b>
-------------------	---	-----------

#### **Chapter 4 - Condition Monitoring of EHV Transmission Lines**

4.1	Introduction	40
4.2	Philosophy of Condition Monitoring	40
4.2.2	Advantages	40
4.3	Condition Monitoring of Transmission Line	41
4.3.2.1	Corrosion Measurement of steel (stub / anchor bolts) in foundation Resistance Measurements Method	41
4.3.2.2	Tower Footing Resistance Measurement	41
4.3.2.3	Conductor Corrosion Detection	42
4.3.2.4	Contact Resistance Measurement of Conductor Joints	43
4.3.2.5	Checking of Clearances of Conductor	43
4.3.2.6	Condition Monitoring of Insulator	44
4.3.2.7	Coronography of Transmission Line	48
4.3.2.8	Line Signature Analyzer (LSA) Unit	49
4.3.2.9	Thermovision Scanning of the Line	50
4.3.2.10	Monitoring of Spacers/Spacer Dampers/Hardware Fittings	50
4.3.2.11	Advanced Condition Monitoring Techniques	51

#### **Chapter 5 - Maintenance Procedures of EHV Transmission Lines**

5.1	Introduction	53
5.2	Methodology	53
5.2.1	Locating the Fault	53
5.2.2	Patrolling and Scheduling	54
5.3	General Safety Precautions	54
5.3.1	Purpose	54
5.3.2	Scope	55
5.3.3	Definitions	55
5.3.4	Dangers	55
5.3.5	General Precautions to be taken before Climbing or Working on Transmission Towers or working on Conductors	56

5.4	Attending to Tower Collapse	57
5.5	Attending to Stub Repair	58
5.5.1	Procedure	58
5.5.2	Tools required for Rectification of Stubs	62
5.5.3	Material required for Rectification of Chimney	63
5.5.4	Tower Material Generally required for Rectification of Stubs	
5.5.4.1	STUB : 2 sets	63
5.5.5	Additional Details	63
5.6	Insulator Replacement	63
5.6.1	Bundle Conductor (Twin / Quad) Transmission Line	63
5.6.2	Bundle Conductor (Twin) Transmission Line	68
5.6.2.	Replacement of Suspension Insulator (I – String)	68
5.6.3	Replacement of Tension Insulator – Procedure 1 (Fig. 9)	74
5.6.4	220 KV Tension Insulator Disc Replacement	78
5.6.5	66 KV & 132 KV Tension Insulator Disc Replacement	78
5.7	Catching Off / Holding Twin/Quad Conductors at Suspension Tower	81
5.8	Raising and Lowering Twin/Quad Conductor and Insulators to the Ground	85
5.9	Repairing of Twin Conductor at Ground of 400 KV Line, - Tension Tower	87
5.10	Procedure for repairing of Conductor at Ground of 400 KV Line, - Suspension Tower	89
5.11	Jointing Procedure	90
5.12	Repair of Twin/Quad Conductor <i>in situ</i> with Mid Span Compression Joint	93
5.13	Repair of Twin/Quad Conductor <i>in situ</i> with Repair Sleeve	94
5.14	Temporary repair of Twin/Quad Conductor <i>in situ</i> with Mid Span / Dead End Compression Joints	95
5.15	Repair of Failed Jumpers	95
5.16	Repair of Failed Earth Wire	96
5.17	Replacement of Nuts and Bolts	103
5.18	Replacement /Repair of Spacer /Spacer Dampers	103
5.19	Anti-Corrosive Measures	106
5.20	Preventive Maintenance of Tower Foundation	107
5.21	Earthing Maintenance of Transmission Lines	107

5.22	Tree Cutting/Trimming	108
------	-----------------------	-----

## **Chapter 6 - Hot Line Maintenance**

6.1	Introduction	110
6.2	History and Development of Hot Line Maintenance Tools	110
6.3	Training	111
6.4	Methods of Hot Line Maintenance	111
6.5	Hot Line Operations	112
6.6	Safety	112
	6.6.1 Safety Rules	112
	6.6.2 Safe Electrical Clearance	113
	6.6.3 Effect of Leakage Current Flow in Body	113
6.7	Ropes and Hot Line Knots	113
	6.7.1 Types of Ropes	113
	6.7.2 Care of Ropes	115
	6.7.3 Knots	115
6.8	Safe Practices for Live Line Barehand Maintenance	115
6.9	Hot Stick Method	116
	6.9.1 Design Considerations	116
	6.9.2 Advantages of Epoxy Glass Stick	116
	6.9.3 Type of Epoxy Tools and its Loading Capacities	117
	6.9.4 Metallic Tools	117
	6.9.5 Care of Tools	118
	6.9.6 Maintenance of Tools	118
	6.9.7 Replacing Ferrules on Epoxiglass Poles	119
	6.9.8 Protecting Tools during Transportation	120
	6.9.9 Inspection of Tools	120
	6.9.10 Repairing Broken Metal Members	120
	6.9.11 Using Limitations	120
	6.9.12 Caution	120
6.10	Live Line Barehand Maintenance	121
	6.10.1 Principle of Live Line Barehand Work	121
	6.10.2 History of Live Line Barehand Work	121

6.10.3	Equipment	122
6.11	Bonding procedure	123
6.12	Important Tools	124
6.13	Procedure	126
6.13.1	Preliminary Works to be taken up before Starting the Hot Line Work	126
6.13.2	Terminology used in the Procedure for Hot Line Maintenance	126
6.14	Hot Line Tools	127
6.15	Procedure for Hot Line Maintenance Work upto 220 KV) – Hot Stick Method	127
6.15.1	Suspension Insulator String	127
6.15.2	Tension Insulator String	128
6.15.3	Precautions	129
6.16	Procedure for the Hot Line Maintenance work in 220 KV Double Circuit Suspension Tower (Middle Phase) using Trolley pole by Hot Stick Method	129
6.17	Procedure for Hot Line Maintenance work (66KV/132KV)	133
6.18	Procedure for Hot Line Maintenance Work – Bare Hand Technique	134
6.18.1	400 KV Single Circuit Suspension Tower (Middle Phase)	134
6.18.2	400 KV Single Circuit Tension Tower (Middle Phase) Using the Method of Controlling of Ladder from Ground	141
6.18.3	400 KV Single circuit Suspension Tower (Outer phase) using Trolley Pole method	150
6.19	Procedure For Hot Line Maintenance Work in 400 KV Single Circuit Suspension Tower (Middle Phase) using Trolley Pole Method	159
6.20	Tightening of nut bolts/ Replacement of spares/ jumper	164
6.21	Replacement of Spacers/Tightening of Nut Bolts/Replacing Jumper in Substation - Line up to 400 KV	165
<b>Annexure A</b>	- Typical List of Hotline Tools Required for Maintenance of Line Upto 220 KV by Hotstick Method	167
<b>Annexure B</b>	- Typical List of Hotline Tools Required for Maintenance of 400 KV line	169
<b>Chapter 7 - Insulator Washing/Cleaning</b>		
7.1	Introduction	172

7.2	Type of Contaminants	172
7.3	Pollution Management/Methods of Cleaning	173
7.3.1	Pollution Management	173
7.3.2	Methods of Insulator Pollution Cleaning	174
7.3.2.1.2	Washing with Medium Pressure Water	185
7.3.2.1.3	Washing with low Pressure Water	185
7.3.2.1.4	Compressed Air – Dry Cleaning	186
7.3.2.1.5	Hot Wiping (Hot Cleaning)	188
7.3.2.2	Cleaning under De-Energized Conditions	189
7.3.2.2.1	Hand Cleaning	189
7.3.2.3	Cleaning of Polymer Insulators	189
7.4	Safety Procedures	189
7.4.1	Technical Considerations for Energized Cleaning with Water	189
7.4.2	Resistivity Measurement and Monitoring	191
7.4.3	Water Pressure	191
7.4.4.	Nozzle Orifice	191
7.4.5	Safety	192
7.5	Frequency and Results of Cleaning	192
7.5.1	Frequency	192
7.5.2	Results	192
7.6	General Guidelines	193
7.6.2	Training	194
7.6.3	Equipment	194
7.6.4	Public	194
7.6.5	Limitations	195
7.7	Practical Experience in Hot Line Washing in India	195
7.7.1	Insulator Washing Methods by other Utility	195
(A)	Live Line Washing	195
(B)	Cold Line Washing	199
7.8	Other Pollution Cleaning Methods	200
7.8.1	Cleaning of Coated (Greased) Insulator	200

7.8.2 Silicone Protective Coatings 200

7.8.3 Silicone RTV Coatings 201

## **Chapter 8 - Emergency Restoration of Damaged Transmission Lines**

8.1	Introduction	203
8.2	Advantages of ERS	203
8.3	Components of ERS	204
8.4	Deployment of ERS System	205
8.4.1	Route Alignment	205
8.4.2	Computerized Calculations	205
8.4.3	Erecting Structure	206
	8.4.3.1 Gin Pole Method	206
	8.4.3.2 By Light Duty Crane	206
	8.4.3.3 Winch Line Method	206
	8.4.3.4 Helicopter Method	206
8.4.4	Anchoring System	207
	8.4.4.1 Cross Plate Anchor	207
	8.4.4.2 Screw/Marsh Anchor	207
	8.4.4.3 Dead Weight Anchor	207
8.4.5	Stringing and clipping of conductor	207
8.4.6	General Precautions	207
8.4.7	Safety Aspects	207
8.5	Training	208
	<b>About the Authors</b>	209
