Foreword	iii
Preface	v
CHAPTER 1: OVERVIEW OF RENOVATION, MODERNISATION, UPRATING AND LIFE EXTENSION OF HYDROPOWER PLANTS	
1.1 Introduction	1
1.2 Hydroelectric Potential	1
1.3 Shortages in Power Supply	2
1.4 Problems in Hydropower Plant Needing R&M	3
1.5 Uprating of Hydropower Plant	4
1.6 Genesis of R&M of Hydropower Plants	6
1.7 Financial Aspect and Policy of Funding of R&M Projects	10
1.8 Conclusion	10
CHAPTER 2 : METHODOLOGY AND ENGINEERING OF RENOVATION, MODERNISATION, UPRATING AND LIFE EXTENSION OF HYDROPOWER PLANTS	
2.1 Introduction	23
2.2 Strategy for Renovation and Modernisation	24
2.3 Scope of RMU&LE Works	25
2.4 Engineering Strategy of R&M	26
2.5 Benefits of Renovation, Modernisation, Uprating and Life Extension	30
2.6 Categorizing of Renovation Works	31
2.7 Classification of Hydro R&M Schemes	32
2.8 Criteria for RLA Studies	34
2.9 Renovation, Modernisation, Uprating and Life Extension Based on Residual Life Assessment Studies	34
2.10 Electrical Systems and Hydro Mechanical Equipment	39
2.11 Instrumentation Requirements	42
2.12 Strategy Aspects	43
2.13 Implementation of RMU&LE Programme	43
2.14 Renovation, Modernisation and Life Extension of Generator Transformers	43
2.15 Civil Works	48
2.16 Preparation of Hydro R&M Proposal	50
2.17 Methodology of Implementation of R&M Programme	52
2.18 Recommended Time Schedule for Implementation of R&M/LE Schemes	52
2.19 Conclusion	52
CHAPTER 3: HYDRO TURBINES AND AUXILIARIES	
3.1 Hydro Turbines	
3.2 Guidelines for Turbines with Arrangement for Silty Water Conditions	84

3.3	Residual Life Assessment	92
3.4	Up-Rating and Refurbishment Studies on Turbines	93
3.5	Residual Life Assessment of Hydro Turbine Shaft	94
3.6	Governor System	95
3.7	Application of CFD in Renovation, Modernisation and Up-rating of Hydroturbines	97
3.8	Turbine Auxiliaries	100
3.9	Vibration Aspects	102
3.10	Case Studies	103
3.11	Conclusion	103

Case Studies

I.	Uttarkashi HEP — Development of New Runner as per Actual Operating Head	117
II	80 MW Francis Turbine — Tail Pool Studies to Contain Vibrations	119
III	110 MW Francis Turbine — Output Limitations due to Tail Pool Constraints	120
IV.	Restoration of Worn out Kaplan Runner of Pathri Power Station	121
V.	Repair of Runner Chamber Liners at Chilla Power Station	123
VI	Failure of Top Cover Studs of Unit-IV of Chilla Power Station	130
VII.	Renovation of Generating Units of Silt Prone Salal Hydropower Station	133
VIII.	Renovation, Modernisation and Up-rating Works at Ganguwal and Kotla Power Houses Located on Nangal Hydel Channel	140
IX	Sediment Problems at Hydroelectric Projects in the Himalayan Region	151
X	Restoration of Kaplan Turbine of Pathri Power Station	160
XI.	Renovation of 25 MW Pelton Turbines and Shafts at Bhira (Maharashtra)	165
XII.	Renovation and Modernization of Generating Units of Nagjhari Powerhouse	174

CHAPTER 4 : HYDRO GENERATORS AND AUXILIARIES

4.1	Introduction	189
4.2	Condition Monitoring and Diagnostic Techniques for Hydro Generators	205
4.3	Life Assessment and Life Extension Programmes	208
4.4	Guidelines for Assessment of Insulation Condition of HV Rotating Machine by Dielectric Diagnostic Tests	211
4.5	Refurbishment and Up-rating of Hydro Generators and Special Checks during R&M Execution	214
4.6	Information Required from Customer for Renovation, Modernisation, Up-rating and Life Extension	219
4.7	Special Checks during R&M Execution	220
4.8	List of Recommended Spares for R, M, U & LE of Hydro Generators	222
4.9	R&M Packages for Generators and Auxiliaries	224
4.10	Conclusion	225

Case Studies

I	Rewinding of Stators and Field Winding of Rotor Poles	231
II	Marthon HEP—Renovation, Modernisation and Up-rating of Generating Units	233
III.	Kadana HEP—Thrust Bearing Temperature Problem	235
IV	Frequent Failure of Air and Oil Cooler Tubes	237

V.	Displacement/Migration of Stator Core	238
VI.	Koyna Stage - III—Stator Core Migration Problem	239
VII.	Analysis of Failure of Stator Air Coolers and Bearing Oil Coolers of 110 MW Units of Srisaïlam Hydroelectric Project	240
VIII.	Unprecedented Damages to Rotor of Unit III of Ramganga Power Station	249
IX.	Dehar Power House (6 × 165 MW)—Stator Problem and Excessive Silt Damages to Under Water Parts	257
X.	Khodri Power Station—Slipping of Stator Core Punchings - Innovative Techniques Developed for Site Repairs without Disturbing Generator Winding	261
XI.	Problem of Stator Winding Temperature Rise in Unit ‘C’ of Dhakrani Power Station and Remedial Measures taken	271
XII	R, M&U Experience of BBMB Power Plants	280
CHAPTER 5 : POWER TRANSFORMER		
5.1	Introduction	293
5.2	Condition Assessment	293
5.3	Condition Assessment Philosophy	296
5.4	Residual Life Assessment	302
5.5	Refurbishment	310
5.6	Uprating Considerations	318
5.7	On-line Monitoring System	320
5.8	Conclusion	331
Case Studies		
I.	Upgradation of 50 MVA, 240 / 115.5 kV (Auto) 34.5 kV - 10 MVA, Loaded Tertiary Ynyno with OLTC for + 10% HV Variation of GE Canadian make to 75 MVA, 220/110 kV Auto Rating	365
II.	Repairs of 227 MVA Canadian General Electric Transformer	366
III.	Conversion of 16800 kVA General Electric USA make Transformer	367
IV.	Condition Monitoring	368
V.	High Temperature Spots on Generator Transformer Tank Body at Bhakra (Right Bank) Power House	372
VI.	Recommissioning of Russian make 135 MVA, 11/220 kV Power Transformer of Unit No. 4 and 5 at Bhakra (Left Bank) Power House	373
VII.	Chamera HE Project – On Site Repair of 400 kV Transformer	375
CHAPTER 6 : PLANT ELECTRICAL AND MECHANICAL SYSTEM		
6.1	Introduction	391
6.2	Approach to Renovation and Modernization	391
6.3	Electrical Equipment and Accessories	392
6.4	Mechanical Equipment	408
6.5	Availability of New Technology Equipments	410
6.6	Conclusion	410
CHAPTER 7 : CONTROL, METERING AND PROTECTION SYSTEMS		
7.1	Introduction	411

7.2	R&M Consideration	411
7.3	Need for R&M of Control, Metering and Protection System	412
7.4	Advantages of Installation of On-Line Monitors	413
7.5	Scope of R& M for Control, Metering and Protection System	413
7.6	Implementation and Installation	415
7.7	Case Studies	415
7.8	Conclusion	415

Case Studies

I.	RMU&LE of Maithon Hydroelectric Project of DVC– Upgradation of Control and Protection System	419
II.	Road Map and Vision Statement of Protection System of BBMB	420

CHAPTER 8: CIVIL STRUCTURES

8.1	Introduction	435
8.2	Civil Structures of Hydropower Plants	435
8.3	Basic Strategies	436
8.4	Optimum Strategy	438
8.5	Conclusion	452

Case Studies

I.	Maneri Dam – Treatment Downstream of the Roller Bucket	457
II.	Comprehensive Safety Review of Rihand Dam and Power House- Conceptual Rehabilitation Plan of Penstock Gallery Frame	463
III	Rehabilitation of Distressed Gates and Equipment of Rihand Dam	469

CHAPTER 9: GATES AND HYDRO-MECHANICAL EQUIPMENT

9.1	Introduction	477
9.2	General	477
9.3	Intent of RMU&LE Study	478
9.4	Equipment Details and O&M History	478
9.5	Scheduling of Studies and Tests	478
9.6	Scope for Study	479
9.7	Applicable Codes/Acts and Standards	482
9.8	Responsibilities of Project Authorities and Vendor	482
9.9	Recommendations and Deliverables	483
9.10	Conclusion	484

CHAPTER 10 : QUALITY ASSURANCE PLAN DURING R&M PROGRAMME

10.1	Introduction	489
10.2	Typical Quality Assurance Plan for Major E&M Equipment	489
10.3	Conclusion	489

CHAPTER 11 : FUNDING OPTIONS AND CONTRACTS

11.1	Introduction	515
11.2	Cost Competitiveness in R&M Activities	516
11.3	Financing Option	517
11.4	Conclusion	520

ABOUT THE AUTHORS	543
